

How to Use this Template

1. Make a copy [File → Make a copy...]
2. Rename this file: “**Capstone_Stage1**”
3. Replace the text in green

Submission Instructions

1. After you’ve completed all the sections, download this document as a PDF [File → Download as PDF]
2. Create a new GitHub repo for the capstone. Name it “**Capstone Project**”
3. Add this document to your repo. Make sure it’s named “**Capstone_Stage1.pdf**”

TravelAdvisor

Description

TravelAdvisor makes it easier to find nearby hotels, great restaurants and places to visit Wherever you go.

The app is mobile friendly and easy to use with following features.

1. Find the best nearest hotels , with reviews and contact information
2. Discover the places to visit near you
3. Explore restaurants with reviews and contact info

4. Add our own experience with a photo.
5. Check flight tickets and availability.
6. Use GPS to get more detail near your location.

Intended User

Travellers

Features

- Find nearby Restaurants
- Find nearby hotels
- Details of Tourist spots
- Nearby shopping centre and much more
- Check flight availability

User Interface Mocks

These can be created by hand (take a photo of your drawings and insert them in this flow), or using a program like Photoshop or Balsamiq.

Screen 1

Login screen enables to sign up with Facebook and Manual Signup.
Manual and Facebook sign up user details maintained locally.

Screen 2

Main screen to allow users to enter the place that they will be visiting, or to use their device GPS to access their current location.

It will be a simple screen with autocomplete text view showing users with various places in the list.

Screen 3

This screen contains a Google Map Widget to provide users to view the location they selected on map. They can change their location by using a pin to mark in map widget.

Then , the screen shows a list of features users can select. These include Hotels, restaurants, tourist place, shopping spots and flight availability to that location.

For eg if you are currently in Delhi, and you want to visit jammu, you can check hotels in jammu (or in a particular region in jammu), restaurants, tourist places you can visit along with flight availability.

More features like train and bus availability may be added to the app along with booking options.

Screen 4

This is Widget design, Enable to provide the application features on widget.

Key Considerations

How will your app handle data persistence?

The app will use a database to store information for caching purpose, and external SD card to allow users to save information offline.

Describe any corner cases in the UX.

Navigation menu helps the user to handle options inside the application.

If no internet connection :

User can able sign up,

Facebook Signup will not work,

User can get offline map on Main screen.

Describe any libraries you'll be using and share your reasoning for including them.

1. Picasso will be used for image loading.
2. Design support library
3. Fire base (if parse is shout down) library for online server
4. Facebook Sdk to allow login from facebook
5. Volley library for background data fetching.

Describe how you will implement Google Play Services.

Integrating google play services by registering the application in google console and integrating the required google play services into the application.

Next Steps: Required Tasks

Task 1: Project Setup

- Search and setup libraries that may be required for development
- Implement requirement analysis.
- Design the flow of project
- Setup Google places API

Task 2: Implement UI for Each Activity and Fragment

- Build UI for each activity.
- Design a splash screen
- Build UI for fragments like restaurants screen, hotel screen
- Design UI to display information for each restaurant and hotel
- Design UI for shopping center.

Task 3: Implement Google Places API and other APIs

- Implementation of Places API to retrieve data
- Implement API to retrieve flight availability
- Display the result in an appropriate manner.
- Design layout to display result

Task 4: Designing for Tablets

- Design app for tablets
- Check compatibility with older phones
- Enable layout mirroring

Task 5: Testing and Debugging

- Design Test cases and perform test accordingly
- Analyze the bugs
- Compatibility with older phones

Task 6: Implement Google Play Services

- Add Admob to the app to generate revenue
- Add Google analytics to analyze the app
- To analyze new users and their behavior

App design specifications and implementing features are :

App provides a widget to provide relevant information to the user on the home screen.App implements a `ContentProvider` to access locally stored data.

App uses a `Loader` to move its data to its views.

If it regularly pulls or sends data to/from a web service or API, app updates data in its cache at regular intervals using a `SyncAdapter`.

Submission Instructions

1. After you've completed all the sections, download this document as a PDF [File → Download as PDF]
2. Create a new GitHub repo for the capstone. Name it "**Capstone Project**"
3. Add this document to your repo. Make sure it's named "**Capstone_Stage1.pdf**"
